Resumee "Networks for Mobility" 2002

The 1st Symposium “Networks for Mobility” held from the 18th to the 20th of September 2002 was a great success. 155 participants from 19 different countries took part in the event and contributed with papers, as well as with statements within the discussions.

FOVUS as the organiser of the symposium strikes a positive balance and feels very satisfied with the reaction of the participants. We think we chose the right topics and selected the respective experts for our meeting in Stuttgart. The symposium underlined the importance and great relevance of topics such as:

- Infrastructure investments versus traffic avoidance
- Resistance in terminals versus intermodal transport chains
- Chances of Intelligent Transport Systems for traffic management
- Necessity of combinations of traffic and urban planning
- Coupling back the environmental effects of transportation
- Transportation and their social impetuses and effects
