The French mathematician Henri Poincaré (1854-1912) generated a significant paper trail during his lengthy and illustrious career in exact science, electrotechnology, and philosophy. The Henri Poincaré Papers website seeks to annotate and publish this paper trail. My presentation has two parts. In the first part, I address the origin and current status of the website, including its data model and workflow, as well as its future direction. In the second part, I show how documents on the website can be used to illuminate questions of interest to the historian of science.
